

TEAM #3 INSTANT AIR

Matthew Begue (EE), Andy Ding (ME), Emily Fontenot (EE), Anthony Genova (ME), Cassidy Hebert (EE), Sara Vega (ME)

RK Baker Group

OBJECTIVE

Design an easy to use, inexpensive system that prevents the interior of an automobile from reaching unsafe temperatures above 100°F.

BACKGROUND

Greenhouse effect causes rapid heating of vehicles. Temperatures above 100°F increase risk of heat injury for elderly, pets, and children.

ENGINEERING SPECIFICATIONS

Specification	Goal	Meets Goal? (Result)
Target Temperature of Interior	< 100°F	✓ (See Figure 3)
Time Taken to Cool Interior	< 10 min.	✗ (See Figure 4)
Battery life	> 1 month	✓ (See Figure 5)
Fan Weight	< 5 lbs	✓ (1.6 lbs)
Screen Weight	< 15 lbs	✓ (2 lbs)
Max Operating Temperature	150°F	✗ (140°F)
Cost of One Fan	< \$40	✗ (\$42)
Cost of Screen	< \$40	✓ (\$25)
Screen Installation Time	< 3 min.	✓ (1.5 min.)
Screen Uninstallation Time	< 5 min.	✓ (1 min.)

ANALYSIS

SYSTEM OVERVIEW

TEST RESULTS

SAFETY

BUDGET

CONCLUSIONS

- Instant Air Screen reduced vehicle temperatures by an average of 33°F.
- Four Instant Air Fans reduce vehicle temperatures by 10°F.
- The screen is more effective, sturdier, cheaper, and easier to use than the fans.
