LOUISIANA WEEKLY CLIMATE SUMMARY
Volume 2, Issue 46
November 11 – November 17, 2026

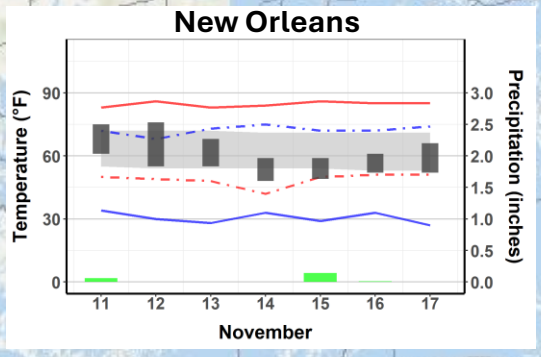

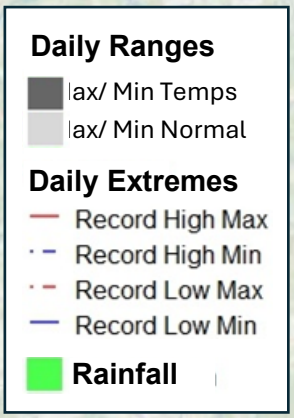

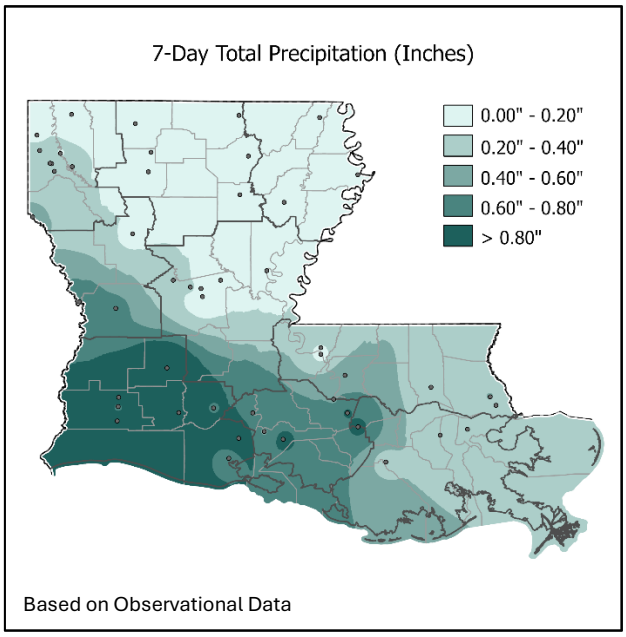

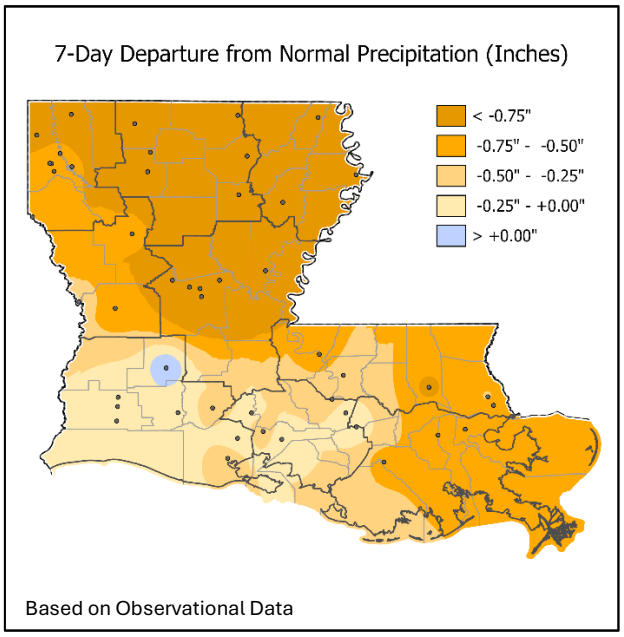

** PROVISIONAL DATA*

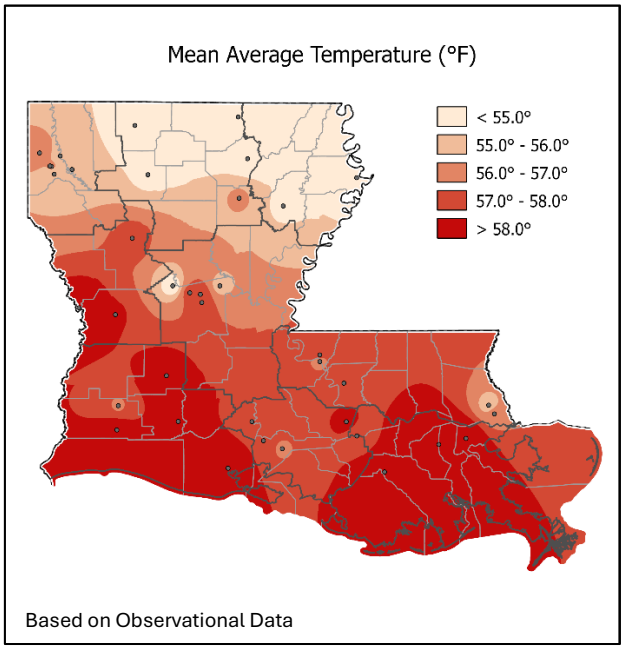

Louisiana Office of State Climatology
Louisiana State University
lastateclimate@lsu.edu
225-578-6870

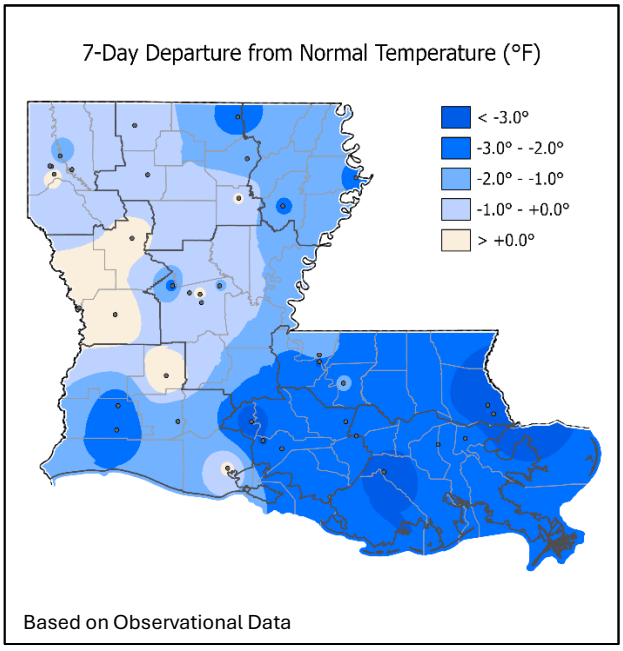

7-Day Accumulated Rainfall & Average Temperatures: 11 - 17 Nov 2026

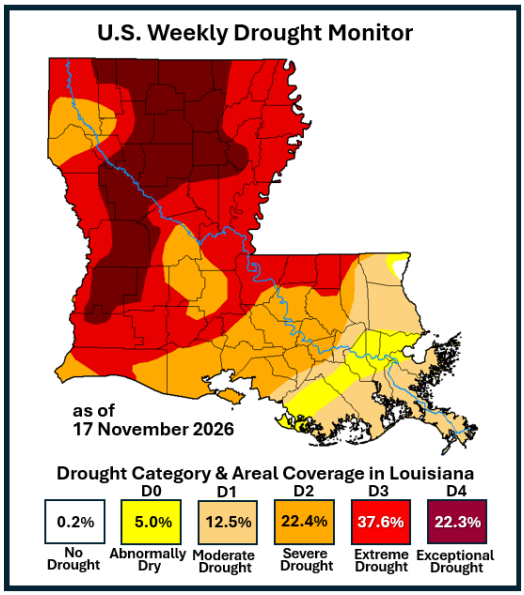

- it was another mostly-dry 7-day run; the only precipitation of note took place on Nov 11, Nov 15, and Nov 16 in association with two separate upper-level lows; frontal passages on Nov 11-12 and Nov 13 yielded no precipitation
- almost all of Louisiana received amounts below 7-day normals, continuing the pattern of recent weeks
- a lack of significant rains led to another round of drought intensification across Louisiana as reflected by the ***U.S. Drought Monitor*** (p. 3)

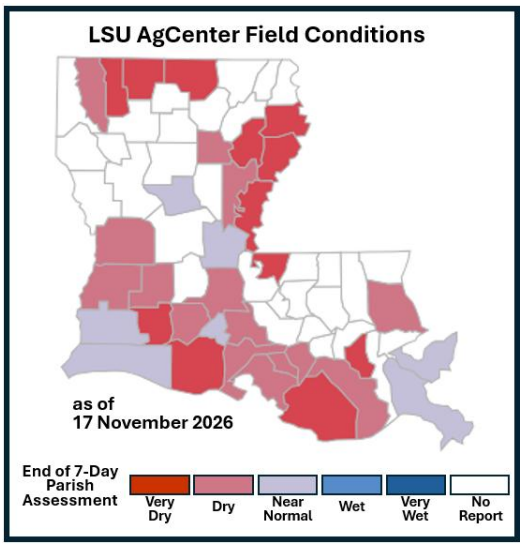

- for the first time in several weeks, average temperatures were below 7-day normals as two frontal passages early in the period delivered the coolest air thus far this season
- the first freezes of the season took place the mornings on Nov 14, Nov 15, & Nov 17 across portions of northern Louisiana, including three sites with lows in the 20°s: 27°F (Nov 14) and 29°F (Nov 15) at Monroe 26 N (NC Div), 29°F (Nov 17) at Homer 1 N (NC Div), and 29°F (Nov 14) at Winnsboro 5 SSE (NE Div)

U.S. Drought Monitor (USDM): Issued November 19, 2026

- includes data thru November 17

- it was a drier-than-normal 7-day period for almost all of Louisiana, continuing the trend of recent weeks and months; indeed, portions of northeastern Louisiana did not receive any rain during the period

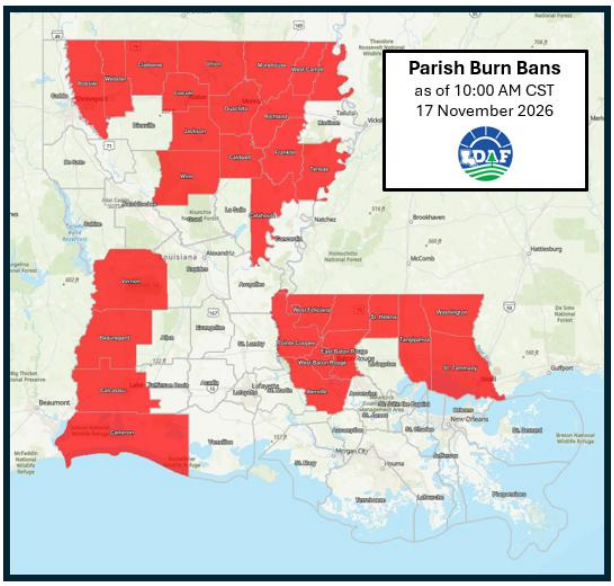

- for the first time in weeks, temperatures were mostly below-normal across the state; however, very dry air and windy conditions after the frontal passages on Nov 11-12 and Nov 13 continued to deplete already critically-low soil-water content

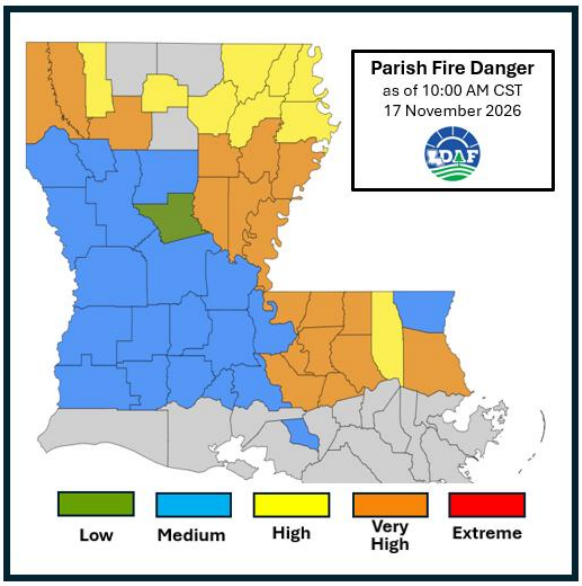

- the updated weekly ***U.S. Drought Monitor*** depiction showed an increase in '*Exceptional Drought*' (D4) coverage across northern and southwestern Louisiana, along with expansion of '*Extreme Drought*' (D3) along the Florida Parishes; in contrast, there were small areas of limited improvement in southwestern Louisiana where some heavier rains fell

- as of Nov 17, most reporting LSU AgCenter parish agents noted 'Dry' or 'Very Dry' conditions in their respective parishes; however, a handful of agents scattered across the state reported 'Near Normal' conditions; most parish agents noted 'No Significant Change' or 'Slightly Improved' conditions during the monitoring period

- as of Nov 15, the USDA noted 'Short' or 'Very Short' topsoil and subsoil conditions for 86% and 88% of the state, respectively

- as of Nov 17, 30 parishes had Burn Bans in effect compared to 34 in the previous weekly summary; Parish Fire Danger levels were listed as 'High' to 'Very High' for 27 parishes, up slightly from 23 in the prior week

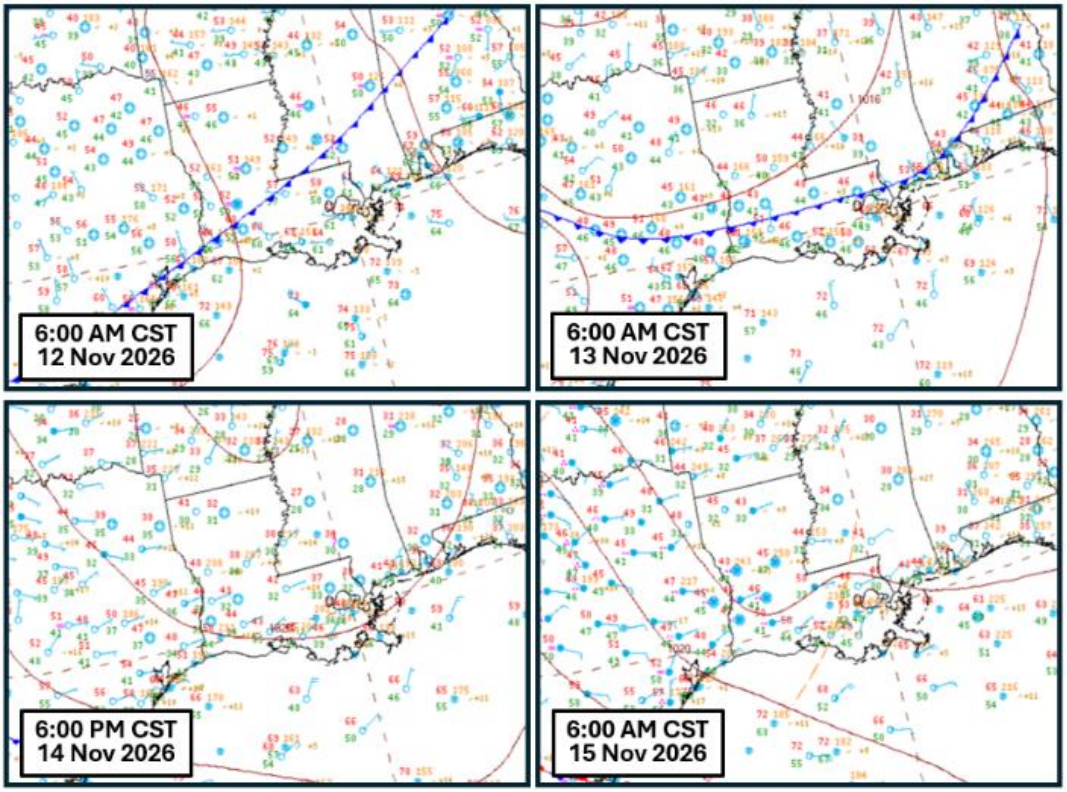

Parish ***Burn Bans*** are issued and lifted by local designated agencies and/or officials. ***Daily Fire Danger*** maps are produced by the USDA Forest Service, the Nat'l Interagency Fire Center (NIFC) & the LDAF.

`

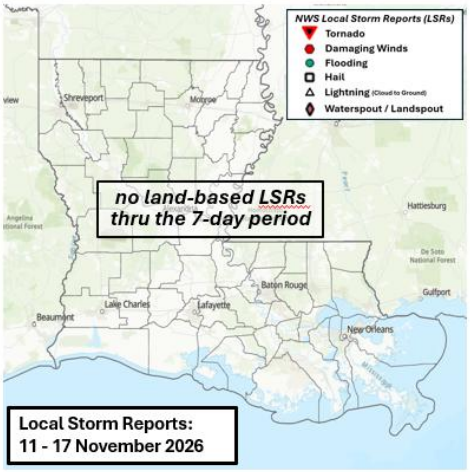

Severe/Stormy Weather:
There were no severe weather *Watches* or *Warnings* issued during the 7-day run, nor were there any *Local Storm Reports* posted by the NWS offices. Two 'cold' frontal passages during the beginning of the period were mainly-dry. Two upper-level systems that moved into the state later in the period provided some moisture but no severe weather.

However, Louisiana's first 'cold weather' *Advisories* and *Warnings* of the season were issued during the period. A *Freeze Warning* was posted for a handful of northeastern and northcentral parishes for the early morning hours of Nov 14. A *Frost Advisory* was also issued that same morning for a number of northwestern and northcentral parishes (p. 5).

Tornado Reports: 11 - 17 November 2026 *(Preliminary)*

EF Rating	Date	Time	Parish(es)	Peak Winds (mph)	Path Length (mi)	Path Width (yds)	Fatalities Injuries	Prop Dmg
no NWS confirmed tornado reports at this time								

Prop Dmg: Structural Damage

T - Temperature (^{0}F) DFN - Departure from Normal P - Precipitation (in.) "-" indicates data not available "M" - missing observation(s)

Divisional & Statewide Averaged Data:

The LOSC's divisional data are developed as guideline regional values. Divisional temperature and precipitation data are calculated using any/all data available within the division at the time of newsletter posting. This differs from the approach used by NCEI/NCDC, which calculates divisional values using only those stations within the division that report both daily temperature and rainfall.

The LOSC's statewide averages are also a guideline number based on the arithmetic average of the temperature and divisional values derived for the nine climate divisions. This also differs from the NCEI/NCDC approach, which incorporates spatial weighting (divisional size) as part of the statewide calculation.

Precipitation and temperature data are primarily retrieved through the ACIS QueryBuilder (rcc-acis.org) and the cli-MATE platform (MRCC Application Tools Environment), both of which are maintained by the NOAA Regional Climate Centers (RCCs).

Drought data are sourced from the U.S. Drought Monitor (unl.edu), the LSU AgCenter, and the Louisiana Dept. of Agriculture & Forestry.
